TECHNICAL SKILLS

Routing & Switching: OSPFv2 (single and multi-area), EIGRP, static and floating static routing, HSRPv2, VLANs, 802.1Q trunking, inter-VLAN routing, STP, Rapid-PVST+, EtherChannel (LACP/PAGP), VTP, ECMP, IPv4/IPv6, subnetting/VLSM, LAN/WAN, TCP/IP, OSI model

Network Services: DHCP (server, relay), DNS, NTP, Syslog, NAT/PAT, SSH, CDP/LLDP, QoS, GRE tunnels

Network Security: ACLs, Port Security, DHCP Snooping, Dynamic ARP Inspection, Root Guard, Loop Guard, BPDU filtering, VLAN-hopping mitigation, SSHv2, device hardening

Wireless: Cisco WLC, CAPWAP, lightweight access points, WPA2

Troubleshooting & Documentation: network troubleshooting, CLI verification (show/debug), OSPF adjacency and LSDB analysis, topology diagrams, IP addressing plans, technical documentation, runbooks (Git/Markdown)

Platforms & Tools: Cisco IOS, Packet Tracer, GNS3, Git/GitHub, VMware Workstation, VirtualBox, Linux (Ubuntu/Debian), Windows 10/11

Concepts (CCNA): SNMP, AAA (RADIUS/TACACS+), IPsec/VPN, SDN, REST APIs/JSON, Ansible/Terraform, cloud and virtualization, PoE, cabling

Programming: Python, C/C++, SQL, JavaScript

CERTIFICATIONS & TRAINING

Cisco Certified Network Associate (CCNA 200-301)

Feb 2026 - Feb 2029

RHCSA training, Corvit (completed; not certified)

LANGUAGES

- English (Professional)
- Urdu (Native)
- Dutch (Learning)

SUMMARY

CCNA-certified Computer Science student seeking a Junior Network Engineer, NOC Engineer or network operations role in the Netherlands. Configured, verified and documented 32 Cisco labs in Packet Tracer and GNS3, including a 15-device campus network with OSPF, HSRPv2, EtherChannel, Layer 2 security and wireless. Methodical troubleshooter: verifies every change with CLI show commands and records it in GitHub runbooks. RHCSA-trained, with basic Linux (Ubuntu/Debian).

PROJECTS

All projects are simulated lab environments

Enterprise Campus Network, 15 devices | Packet Tracer

github.com/abdulwahabsaim/cisco-enterprise-campus-mega-lab

- Configured and verified a two-building campus (routed Layer 3 core, 4 distribution and 6 access switches, edge router, WLC, server) entirely via CLI; scored 100% on the lab's built-in assessment.
- Built redundancy: HSRPv2 gateways aligned with Rapid-PVST+ root bridges, OSPFv2 Area 0, dual-ISP floating static failover, PAGP/LACP EtherChannels.
- Hardened Layer 2: Port Security, DHCP Snooping, Dynamic ARP Inspection, DTP suppression, SSHv2 restricted by ACL.
- Deployed DHCP relay (7 scopes), DNS, NTP, Syslog, NAT/PAT, IPv6 dual stack and a 3504 WLC with CAPWAP.
- Documented 13 device configs, an addressing/VLAN matrix, a 10-slide architecture deck and a NOC troubleshooting runbook.

Supporting Lab Repositories, 31 labs | Packet Tracer, GNS3

github.com/abdulwahabsaim

- Routing (13):** EIGRP, multi-area OSPF, HSRP, floating static, ECMP, QoS, GRE. Diagnosed OSPF adjacency failures (timers, network type, MTU) with show commands and LSDB inspection.
- Layer 2 Security (13):** Reproduced a rogue root bridge and a broadcast storm from misconfigured BPDU filtering; fixed and verified with Root Guard and Loop Guard. Also port security (3 violation modes), DAI, LACP/PAGP, ACLs.
- Network Services (5):** DHCP/DNS/HTTP, cross-WAN DHCP relay, authenticated NTP, centralised Syslog, WLC with dual SSIDs.

EDUCATION

BS Computer Science, University of Central Punjab

CGPA 3.58 | 2022 - Present

Coursework: Computer Networks, Data Communications, Operating Systems, Data Structures and Algorithms, Database Systems
